

Reval'access

Durability · Reliability · Hygiene

Exclusive innovation: the first 316L stainless steel footbath that complies with accessibility, hygiene, safety and slip resistance standards.

A one-piece footbath with GUARANTEED watertightness!

UNIQUE EXPERTISE

50 years of expertise in water services

Our history

It all began in La Rochelle in **1976**. **Two brothers**, passionate experts in the world of healthcare, shared the same ambition: **to devise innovative solutions to help disabled people regain their independence**. Their vision was clear: to put technology at the service of care and put people back at the centre.

From the very beginning, they made a bold choice: to position themselves in the **high-end market**, prioritising **quality over quantity**.

Each product is designed with precision and high standards, built to last and offer the best possible experience for both carers and patients.

Innovation

Balneotherapy

Over the years, from the Atlantic coast to international locations, France Reval has transformed balneotherapy into **a true art of care**.

Whether public or private, we have carried out numerous **bespoke projects**, with **pools and equipment designed** to meet the specific needs of each establishment, whether new builds or renovations.

Today, our story continues to be written with passion, placing **quality, innovation and well-being** at the heart of every innovation, such as our new **Reval'access** foot bath, combining safety, comfort and efficiency.

REVAL'ACCESS FOOTBATH

Durable, Secure, Hygienic

Ceiling-mounted presence detector

Length and width of the footbath comply with disinfection standards for circulating transfer equipment (wheelchairs, trolleys, etc.).

Guardrail with rail and sub-rail

Calf spray system

Continuous automatic filling system

Combined decontamination by spraying and immersion

Anti-slip coating compliant with PN24 standard

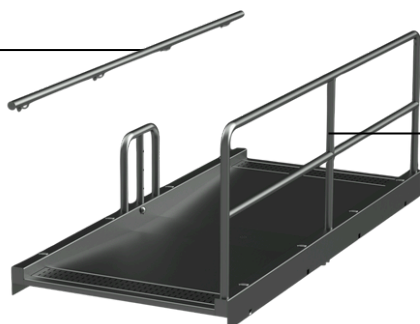

Configurable and automated superchlorination system

Welded pipe network with guaranteed watertightness

Retractable water collection channel grate with integrated overflow system for quick cleaning

Integrated dechlorinator

Version of the footbath with wall-mounted handrail

Version of the footbath with integrated guardrails

Automatic activation of nozzles when passing through the footbath

Reval'access footbath decontamination zone thanks to combined double decontamination.

Standard

- Footbath 2.2m x 1m
- Gutter grates
- Drainage
- Fixing brackets
- Installation and commissioning

Available as an option

- Overchlorination
- Guardrails
- Handrails
- Dechlorinator
- Custom-made (specific dimensions)

The 316L stainless steel footbath, Reval'access

This footbath represents an innovation and a major advance in the market. It is the **first complete, ready-to-install footbath made of 316L stainless steel**. It offers superior durability and hygiene compared to traditional materials. 316L stainless steel, in particular, is known for its exceptional resistance to corrosion, chemicals and temperature variations, ensuring increased product longevity and reduced maintenance.

Specially designed for institutions such as public swimming pools, wellness centres, rehabilitation centres and hotels with high **hygiene standards**. This unique and **innovative** device is a must-have for your **balneotherapy area**.

French manufacturing and superior quality

Reval'access is **manufactured in France in La Rochelle (17)**, guaranteeing impeccable design and manufacturing quality. We also ensure complete traceability of materials and compliance with the strictest production standards. Choosing a locally manufactured product also means supporting the national economy and benefiting from the increased responsiveness that is essential to the completion of your projects.

The advantages of stainless steel

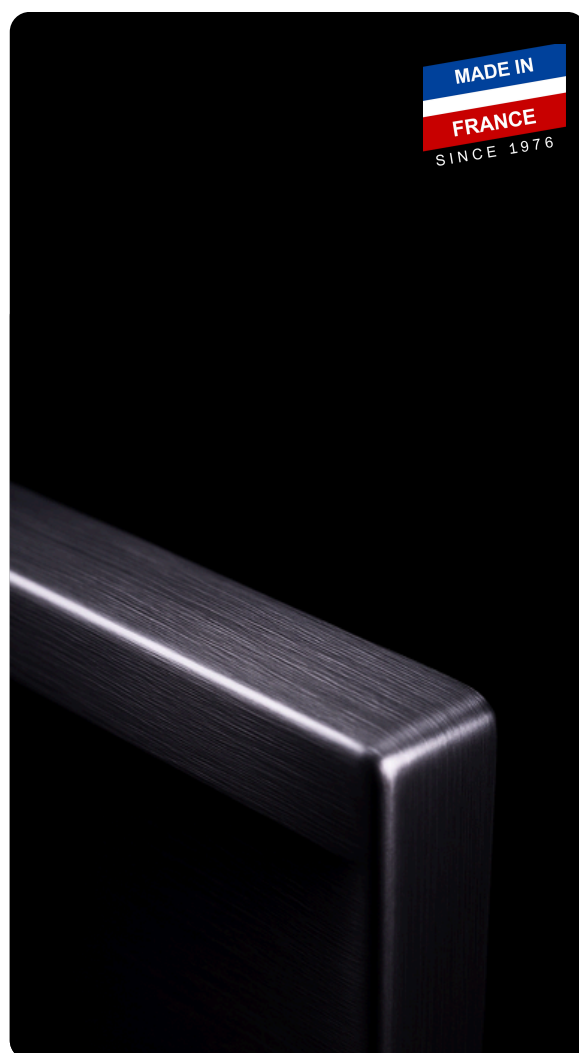

Guaranteed waterproofing!

Tiled footbaths present a risk of leaks due to the joints. Reval'access, designed as a single welded unit, completely eliminates this problem: no infiltration is possible. The watertightness is tested in the factory using a dye penetrant test for lasting safety and guaranteed watertightness.

Full compliance

Optimised dimensions, disabled access, time savings on site, reduced risk of infection, simple upkeep and easy maintenance: Reval'access is the footbath your facility needs!

The advantages of the **REVAL** footbath

Self-managed and autonomous footbath

Reval'access is designed for simplified use thanks to its self-managed and autonomous features. This means that it requires minimal user intervention for its daily operation. There are many advantages:

Time savings for staff

Less manual handling is required. Overchlorination, filling and emptying are automated, ensuring hassle-free, simple and efficient use.

Ease of maintenance

Thanks to its seamless, tile-free design, Reval'access offers high hygiene standards and limited annual maintenance.

Water and product savings

Automating chlorine injection helps to limit product consumption and give you even greater control over your budget.

Customisation and Adaptability

Flexibility is at the heart of our footbath design. It is fully **customisable to suit the needs and technical constraints of each installation (guardrails, handrails, bespoke dimensions)**. Whether you require specific dimensions, special integration requirements or additional features, Reval'access adapts and integrates perfectly into your environment.

In addition, **it features a unique fastening system and is factory tested for watertightness using a dye penetration test.**

This equipment comes with a **ten-year professional warranty**, giving you peace of mind in your operation!

Accessibility & Safety

Option

1 Guardrail

Attached to the footbath with a rail and under-rail, the guardrails allow both adults and children to hold on when passing through the footbath. Its design also makes it possible to cordon off an area or protect a wall from potential impacts.

Option

2 Handrails

Fixed to the wall, the custom-made handrails offer optimal safety by allowing the user to hold on throughout the entire route.

Enhanced Security

User safety is our priority. To prevent the risk of falls, **our footbath is available with safety railings or handrails**. These features provide additional support, which is particularly useful for people with reduced mobility or the elderly.

The footbath floor is non-slip and complies with **PN 24 standards**. This classification indicates excellent grip, even in the presence of water and disinfectants, thereby significantly minimising the risk of slipping. PN 24 standards (often linked to DIN 51097 standards for barefoot or wet areas) ensure a high coefficient of friction, guaranteeing maximum safety.

PMR Footbath and Complete Decontamination

Our footbath is suitable for people with reduced mobility (PRM), ensuring accessibility for all. Its design allows for effective **decontamination of the lower limbs and transfer equipment**. This PRM adaptability is essential for establishments catering to a diverse clientele.

Disinfection and Maintenance

The maintenance of our footbath has been designed to be as simple and hygienic as possible:

Its retractable channel with 316L stainless steel grating is a major innovation that makes maintenance extremely easy. It simplifies cleaning by limiting the accumulation of residue and ensuring impeccable cleanliness.

Draining and refilling are configurable and automated, offering complete flexibility in managing disinfection and drainage cycles. You can adjust the frequency and volume of water and disinfectant according to your specific needs (opening/closing your balneotherapy area, etc.), thereby optimising efficiency and consumption of water and disinfectants.

Its unique filling system allows for complete disconnection of the clean water and treated water networks from the footbath in accordance with **Standard EN1717**.

This disconnection is a guarantee of health and safety. European Standard **EN 1717** aims to prevent the contamination of drinking water by wastewater or other contaminated fluids. By ensuring physical separation between clean mains water and footbath water (which may be contaminated after use), it protects your mains water and complies with the most stringent regulations on the protection of clean water systems.

MAINTENANCE OFFER

Tailor-made support

At France Reval, maintenance is much more than just a service: **it is a commitment.**

We know that your equipment is essential to the comfort, safety and quality of the care you provide every day. That is why we have designed tailor-made maintenance contracts, designed to guarantee you peace of mind and long-term performance.

1 Rapid and comprehensive diagnosis in the event of malfunction

In the event of a breakdown or malfunction, our technicians carry out a precise and comprehensive diagnosis of your equipment. This approach allows us to quickly identify the source of the problem and propose the most appropriate solution, in order to minimise the impact on your business.

2 Average response time: 48 hours

We respond within 48 hours on average to minimise downtime for your equipment and ensure continuity of care.

3 Servicing by a team of expert technicians

Trained in our solutions, our technicians provide high-quality maintenance to preserve the performance and longevity of your equipment.

A customised maintenance offer

1

SILVER

Work comfort and compliance of your equipment.

2

GOLD

Full cost management and complete control of your expenses.

3

PLATINUM

Peace of mind: aim for excellence in maintenance services, both preventive and curative.

Contact us!

TRAINING

Customized training courses for complete mastery of the equipment provided, covering both use and maintenance.

CUSTOMISED ADVICE

Our in-house design office will assist you with your customised layout projects.

MAINTENANCE AGREEMENT

For greater peace of mind and tranquility, three tailored maintenance packages are available.
